In partial fulfillment for the requirements of the award of the degree of

Bachelor of Technology in Computer Science and Engineering

Lovely Professional University
Phagwara, Punjab

Report Given by WNS Cares Foundation

1. Introduction

In today's digital world, the internet has become an essential part of our daily lives, influencing communication, business, education, and social interactions. However, this increasing dependency has also exposed users to various cyber threats such as phishing, identity theft, online scams, and data breaches. Cyber security awareness is crucial for every internet user, especially in a society where digital literacy is still evolving. To address this growing concern, our community development project focused on raising awareness about cyber safety and preventive measures. In collaboration with WNS Cares Foundation, a well-known organization dedicated to creating a safer digital environment, we conducted several interactive sessions and awareness campaigns to educate different sections of the community including school students, college-goers, and working professionals. The campaign not only informed people about the common cyber risks but also equipped them with basic knowledge and tools to stay safe online.

2. Problem Identification and the Cause of the Problem

Despite the growing internet usage, a significant portion of the population lacks awareness about cyber security practices. Many individuals are unaware of how to identify phishing links, secure their passwords, or recognize social engineering attacks. This lack of knowledge makes them vulnerable to cybercrimes, leading to financial loss, emotional distress, and breach of privacy.

3. Objective to be Achieved

The primary objective of this project was to educate people about basic cyber hygiene and create awareness on identifying and preventing cyber threats. I aimed to empower individuals, especially students and the elderly, with practical knowledge that they could implement immediately. The campaign also targeted creating a ripple effect by encouraging participants to spread awareness within their communities.

4. Various Steps Taken to Achieve the Objectives

To achieve the above objectives, I undertook a structured approach that involved planning, coordination with WNS Cares Foundation, content preparation, and active implementation across different mediums.

◆ 1. Selection of School and Students

I selected a local government school where students from classes 6 to 10 were active mobile users but had little knowledge about online safety. After getting permission from the school principal, I finalized a date for the awareness session.

◆ 2. Getting Help from WNS Cares Foundation Cyber Smart Interface

I took help of WNS Cares Foundation Cybersmart interface to teach them about Cyber Security. It helped me to guide students on how to explain technical terms in a simple way.

◆ 3. Creating Content for Students

I created a PowerPoint presentation and printed posters that explained:

- What is cyber crime?
- How to create strong passwords
- Dangers of clicking unknown links
- Importance of not sharing OTPs and personal info

- How to use social media safely
I kept the language very simple and added pictures so even younger students could relate.
-

◆ 4. Organizing the Awareness Session

On the event day (24th July 2025), I reached the school early and . About 40 students gathered in a classroom. The session lasted about 1 hour and included:

- A Session on Real-life examples of cyber fraud
 - Teach them about Trojan, Spywares and helping them to learn from Cyber Smart Interface after the Seminar
 - A Q&A round where students asked interesting questions
-

◆ 5. Making it Interactive and Fun

To keep students engaged, I asked small questions during the session and gave small gifts (like pens) to those who answered correctly. This helped them listen actively and enjoy the session.

◆ 6. Distributing Cyber Safety Leaflets

After the session, I gave each student a handout called a “Cyber Hygiene Kit” which included:

- 10 safety tips
 - Emergency helpline number (1930)
 - How to report cyber fraud
Students were told to keep it at home and share it with their parents too.
-

◆ 7. Taking Photos and Proofs

During the event, I took **geo-tagged photos** with my phone showing students, posters, and activities happening live. These photos are included in the report as proof of the work done.

◆ 8. Collecting Feedback

At the end of the session, I gave a short feedback form with three questions:

1. Did you learn something new?
2. Will you follow these safety tips?
3. Do you want such sessions again?

Most students answered “Yes” and even teachers appreciated the effort. One teacher said, “These tips will help even us while using WhatsApp and online banking.”

◆ 9. Sharing on Social Media

After the event, I shared a few photos and cyber safety tips on Instagram and WhatsApp. Many friends and family members liked and forwarded the post, helping spread awareness to even more people.

4. Geo Tagged Pictures

6. Effectiveness of the Project

The Cyber Security Awareness Campaign proved to be highly effective in building digital resilience among the community. Post-session surveys indicated that over 85% of participants were now aware of basic online safety measures, and more than 60% of school students took an online pledge for safe internet usage. Parents appreciated the practical tips on child-safe browsing and phishing prevention. The campaign not only educated individuals but also created a long-lasting impact by sparking conversations about cyber safety in homes and schools. Here are the list of trained students.

7. Identified Societal Problems

1. Lack of awareness about basic cyber hygiene, making individuals vulnerable to fraud and scams.
2. Increasing exposure of children and teenagers to inappropriate or harmful online content without proper parental control or digital literacy.

8. Conclusion

This Community Development Project on Cyber Security Awareness conducted in partnership with WNS Cares Foundation was an insightful and impactful initiative. It

successfully addressed the urgent need for digital safety education, especially in under-informed communities. The campaign not only empowered participants with knowledge but also promoted a culture of digital responsibility. The collaborative efforts of volunteers, mentors, and community members ensured the project's success. Such initiatives should be continued and expanded further to build a secure and informed digital India.
